implementation
habits

Conclusion

Automated testing habits

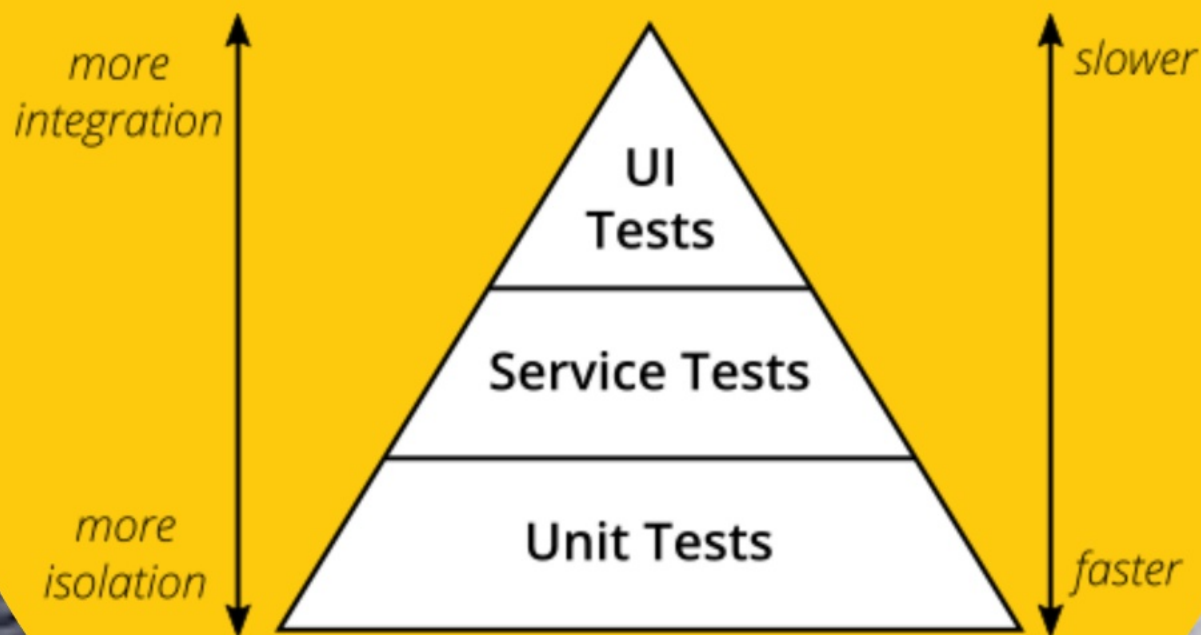

Obsessive principles inherited from the Chicago school...

Test pyramid

Code coverage

The practical test pyramid. The problem

The better way

Acceptance tests

- drive the design with acceptance tests, instead of obsessing over unit tests
- less unit tests

Code coverage relevant?

Symbol	Coverage (%) ▲	Uncovered/Total Stmts. ▲
▸ (X) NUnit.Framework.Internal.Filters	8%	279/302
▸ (X) NUnit.Framework.Internal.Builders	49%	631/1241
▴ (X) NUnit.Framework.Internal.Execution	54%	157/345
▸ 🐞 LogCapture	0%	7/7
▸ 🐞 TextCapture	0%	24/24
▸ 🐞 Log4NetCapture	1%	94/95
▴ 🐞 WorkItem	68%	24/76
🔧 RunTestOnOwnThread(int, ApartmentSta...	0%	22/22
🔧 Execute()	78%	2/9
🔧 WorkItem()	100%	0/1
▸ 📄 State	100%	0/3
▸ 📄 Test	100%	0/3
▸ 📄 Context	100%	0/3
▸ 📄 Result	100%	0/3

The better
approach

Not all that relevant

- the nature of TDD approach will naturally lead to enough coverage
- 60% is good enough - if we bother with measurement at all

Ready for takeoff?

implementation
habits

Conclusion

Code design and implementation habits

Not using
TDD enough

Interface
abuse

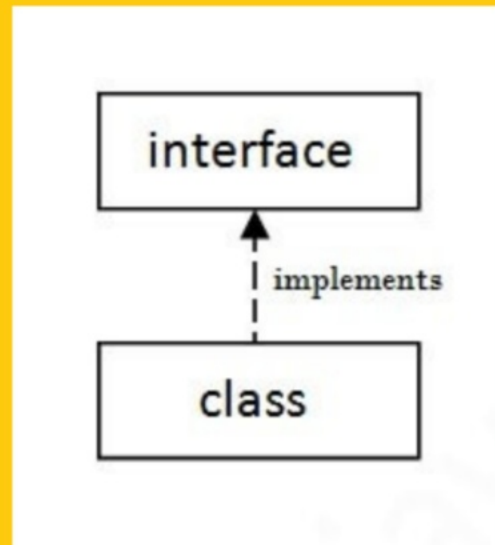

Working
alone

Why using TDD saves us time and headaches?

- TDD ensures outside-in design thinking, therefore feature focus
- Challenging in already existing systems, but worth a try for new components

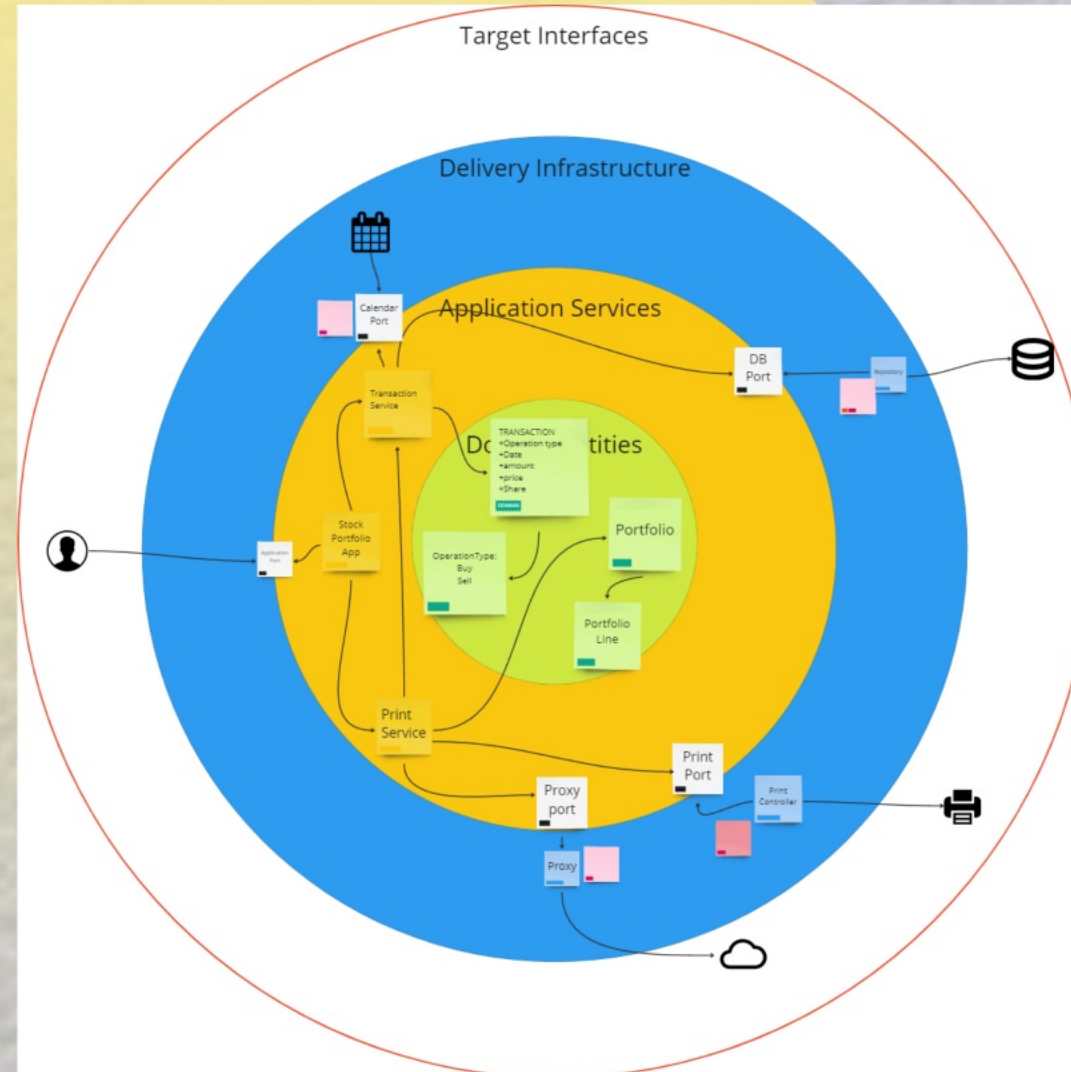

Interface abuse

CHICAGO

The
better
way

Use interfaces around ports, mostly

Practice mob-or pair programming,
whenever possible

Conclusion

Conclusion

WHAT'S YOUR
SUPERPOWER?

As an IT
professional, I have
to review my habits
every now and then

Take advantage of
the "why?"'s
