My take on

Continuous Refactoring

Agenda

- Low hanging Fruits

- Boyscout Rule

- Plannability

- Techniques

Low hanging Fruits

- Solve easy things first

- Harder things might become the new lowest hanging fruits

Boyscout Rule

- Leave code better than you found it

- Make tidying up part of your coding routine

Plannability

- Just do it! It is part of our job.

- Major changes taking more time should be planned.

Techniques

- Lean on the compiler

- Run tests, refactor, run tests again

Refactor continuously to keep your code clean in the long run.

Are there any questions?

Start refactoring continuously!
